A CRM APPLICATION FOR THE CHAI SHOP & CO

User Story:

As a sales representative working at TheChaiShop&Co, I need a reliable CRM application that helps me manage customer information, employer records, and enterprise accounts efficiently in a single platform. Currently, handling customer orders and maintaining records manually can be time-consuming and may lead to calculation mistakes or missing data. Therefore, I want a system that allows me to quickly create, update, and access customer profiles along with their order history and payment details.

The CRM application should also help me differentiate between online and walk-in customers using record types so that each order can be tracked properly. I would like the system to automatically calculate the order quantity and total bill amount based on the products selected, which will reduce manual effort and improve billing accuracy. In addition, it should maintain organized records that can be used by managers to monitor daily sales and business performance.

Another important feature I expect from this CRM application is automated communication with customers. For example, the system should automatically send birthday wishes or special promotional offers through email to strengthen customer relationships and increase customer satisfaction. Overall, the CRM system should simplify business operations, reduce errors, and help TheChaiShop&Co deliver better service while supporting business growth.

1. INTRODUCTION

Customer Relationship Management (CRM) is an important concept in modern business that focuses on building strong relationships with customers while efficiently managing business data. Organizations use CRM systems to store customer information, track interactions, manage sales activities, and analyze business performance. In small and medium businesses such as retail shops, managing customer details and sales records manually can often lead to mistakes, data loss, and inefficient operations.

The project titled “A CRM Application for TheChaiShop&Co” aims to develop a cloud-based CRM system using the Salesforce platform. The main goal of this project is to create a centralized system that helps manage customer accounts, employer details, and enterprise accounts efficiently. The CRM system will help store all important information in one place, making it easier for employees and managers to access and update records whenever required.

1.1 Project Overview:

This application will also automate several business tasks such as billing calculations, order tracking, and customer communication. For example, the system can automatically calculate the total bill amount based on product quantity and price. It can also send automated emails to customers on special occasions such as birthdays.

By implementing this CRM system, TheChaiShop&Co can improve operational efficiency, reduce manual errors, and provide better customer service. The system will also help managers analyze sales performance through reports and dashboards, enabling better business decisions.

2. IDEATION PHASE

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Sales Representative	Manage customer orders and billing	Calculations are often incorrect	Order quantity and billing are manual	Stressed and inefficient
PS-2	Store Manager	Monitor sales and customer records	Reports are delayed and incomplete	Data is stored in multiple files	Confused and dissatisfied
PS-3	Customer	Receive personalized offers and updates	I do not get timely notifications	There is no automated communication	Disconnected and undervalued

2.1 Problem Statement (Customer Problem Statement Template)

The ideation phase is an important step in the project development process where ideas are generated, analyzed, and refined to identify the best possible solution for a problem. In this project, the ideation phase focused on understanding the challenges faced by TheChaiShop&Co in managing customer data, orders, and billing processes manually.

During this stage, various possible solutions were discussed and evaluated to determine the most effective approach for improving business operations. The project team analyzed the existing manual system and identified several issues such as data duplication, billing calculation errors, and difficulty in tracking customer purchase history.

These problems highlighted the need for a digital solution that could manage customer relationships more efficiently.

Brainstorming sessions were conducted to generate ideas about how technology could be used to improve customer management and sales tracking. Different types of systems such as spreadsheet-based management, standalone billing software, and web-based CRM platforms were considered. After evaluating the advantages and limitations of each option, a cloud-based CRM system using Salesforce was selected as the most suitable solution.

The ideation phase helped clearly define the project objectives and requirements. It also ensured that the proposed solution would effectively address the business needs of TheChaiShop&Co while providing scalability and automation features.

2.2 Empathy Map Canavas

The Empathy Map Canvas is a design thinking tool used to understand the needs, thoughts, and experiences of users. It helps project developers analyze how users interact with a system and what challenges they face in their daily work. In the CRM application project for TheChaiShop&Co, the empathy map was used to identify the expectations and difficulties experienced by employees and managers who handle customer data and sales records.

The users of the CRM system include sales staff, shop managers, and CRM administrators. These users often think about how to maintain accurate records, provide quick service to customers, and avoid mistakes during billing. They may hear feedback from customers regarding service delays or incorrect billing amounts. They also observe that maintaining paper records or manual spreadsheets makes it difficult to track information efficiently.

From the empathy map analysis, several pain points were identified. These include time-consuming manual data entry, difficulty in finding customer records, and the risk of errors in billing calculations. At the same time, users expect a system that simplifies their tasks, provides accurate results, and saves time.

By understanding these needs and challenges, the CRM application was designed to provide features such as automated billing, organized data storage, and easy record management, which greatly improves the user experience.

2.3 Brainstroming

Brainstorming is an important activity in the ideation phase where multiple ideas are generated to solve a particular problem. In this project, brainstorming sessions were conducted to identify possible solutions for improving customer relationship management in TheChaiShop&Co. The team discussed different methods that could help manage customer records, track orders, and simplify billing operations.

Initially, several options were considered, including maintaining manual registers, using spreadsheet software, implementing standalone billing systems, and developing a web-based CRM platform. Each option was carefully evaluated based on factors such as efficiency, scalability, cost, and ease of use.

After analyzing the available options, the team concluded that a cloud-based CRM platform would be the most effective solution. Salesforce was chosen because it offers powerful tools for data management, automation, reporting, and customization. It also provides secure cloud storage and easy access from different devices.

The brainstorming process helped generate innovative ideas and identify the most practical solution for the project. It ensured that the CRM application would effectively meet the operational needs of TheChaiShop&Co while improving overall efficiency.

3.REQUIREMENT ANALYSIS PHASE

A customer journey map is a visual representation that describes the stages a user goes through while interacting with a system or service. In the CRM application for TheChaiShop&Co, the customer journey map helps illustrate how users interact with the CRM system to manage customer data and sales operations. It highlights the steps involved from the moment a user logs into the system until business insights are generated through reports and dashboards.

The journey begins when a user logs into the CRM application using secure credentials. After accessing the system, the user can navigate through the dashboard to create new records or view existing customer information. If a new customer visits the shop or places an online order, the user enters the customer details into the CRM system. The application then stores this information securely in the database.

The next stage involves recording the order details and calculating the total bill amount automatically based on product quantity and price. Once the transaction is completed, the data is saved and can be accessed later for analysis. Managers can then use reports and dashboards to monitor sales performance and customer activity.

The customer journey map helps developers understand how users interact with the system and ensures that the CRM application provides a smooth and efficient experience.

3.2 FUNCTION REQUIREMENTS

FR no	Requirement
FR-1	User Login
FR-2	Object Creation
FR-3	Data Entry
FR-4	Billing Automation
FR-5	Report Generation
FR-6	Email Automation

Solution requirements define the specific features and capabilities that a system must include to meet the needs of its users. In the CRM application for TheChaiShop&Co, the solution requirements were identified based on business needs and operational challenges. These requirements ensure that the CRM system functions effectively and supports the daily activities of employees and managers.

The functional requirements of the system include user authentication, customer record management, employer account management, and enterprise account tracking. The system must allow users to create, update, and delete records easily. It should also calculate billing information automatically and categorize orders based on different record types such as online orders and walk-in orders. Another important requirement is automated communication. The CRM system should send automated emails to customers on special occasions such as birthdays. This feature helps maintain good relationships with customers and increases customer loyalty.

The non-functional requirements focus on system performance, security, and usability. The CRM application should provide a simple and user-friendly interface so that employees can use it without difficulty. It must also ensure secure storage of customer data and provide reliable performance with minimal downtime.

These solution requirements serve as the foundation for designing and implementing the CRM system.

4. PROJECT DESIGN PHASE

4.1 Problem Solution Fit

The project design phase focuses on transforming the system requirements into a structured solution. In this stage, developers create the overall design of the CRM application and determine how different components of the system will interact with each other. The goal of this phase is to create a clear blueprint that guides the development and implementation of the project.

In the CRM application for TheChaiShop&Co, the design phase involved defining system architecture, database structure, and user interface elements. Custom objects were designed to store different types of information such as customer details, employer records, and enterprise accounts. These objects help organize data in a structured and easily accessible manner.

The design phase also included planning the automation features of the system. For example, formula fields were designed to calculate billing amounts automatically, and scheduled flows were created to send automated email notifications to customers. Page layouts and record types were also designed to ensure that users can easily manage different types of orders.

By carefully designing the system before development, the project team ensured that the CRM application would be efficient, scalable, and easy to use. This phase played a crucial role in ensuring that the final system meets the requirements identified during the requirement analysis stage.

4.2 Proposed Solution

The proposed solution for TheChaiShop&Co is a cloud-based CRM application developed using the Salesforce platform. This system is designed to manage customer data, employer accounts, and enterprise accounts efficiently in a centralized environment. The application aims to simplify daily business operations and improve the overall customer management process.

The CRM system allows users to create and maintain customer profiles that include details such as name, contact information, purchase history, and order preferences. Employees can also record new orders and categorize them as online orders or walk-in orders using record types. This helps in organizing transactions and maintaining accurate records.

One of the key features of the system is automated billing calculation. When the user enters product details and quantity, the system automatically calculates the total bill amount. This feature eliminates manual calculations and reduces the possibility of errors.

Another important feature is automated communication with customers. The system can send email notifications to customers on their birthdays or during promotional events. This helps improve customer relationships and encourages repeat purchases.

By implementing this CRM solution, TheChaiShop&Co can improve operational efficiency, maintain organized records, and gain valuable insights through reports and dashboards that support better business decision-making.

4.3 Solution Architecture

Architecture Layer

Solution architecture describes the overall structure of a system and how different components interact to perform required functions. In the CRM application for TheChaiShop&Co, the architecture is designed to provide a secure, scalable, and efficient platform for managing customer data and business operations.

The system follows a layered architecture approach. The first layer is the user interface layer, which allows users to interact with the application through Salesforce Lightning components.

This interface provides forms and dashboards where employees can enter customer information, record orders, and view reports.

The second layer is the application logic layer, where the business rules and automation processes are implemented. This layer includes validation rules, workflows, and scheduled flows that perform tasks such as calculating billing amounts and sending automated emails to customers.

The third layer is the data storage layer, which stores all information in Salesforce custom objects. These objects include employer accounts, customer accounts, and enterprise accounts. Each object contains fields that store specific details related to the business.

The final layer is the analytics layer, where reports and dashboards are generated. These analytics tools help managers analyze sales performance and customer trends, enabling them to make informed business decisions.

5.PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Project planning and scheduling are essential steps in the successful completion of any software development project. In this CRM application project for TheChaiShop&Co, careful planning was carried out to ensure that all development activities were completed within the required time frame.

The planning phase began by identifying the main objectives of the project and dividing the work into smaller tasks. Each task was assigned to a specific stage of development such as system design, object creation, automation setup, and testing. A timeline was created to track the progress of each activity and ensure that deadlines were met.

Scheduling also involved determining the order in which different tasks should be performed. For example, creating a Salesforce developer account was the first step before configuring custom objects and fields. After that, automation features such as validation rules and flows were implemented. Finally, reports and dashboards were created to analyze the stored data.

Regular reviews were conducted during the project to monitor progress and identify any issues that might affect the development process.

Product Backlog, Sprint Schedule, and Estimation

Sprint	Functional Requirement (Epic)	User story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2	Data Modeling	USN-4	As a manager, I want a dedicated Lightning App so that all CRM operations are accessible from a single dashboard.	3	High	Megala S
Sprint-2	Data Modeling	USN-5	As an admin, I want to create customer and order fields so that complete sales and billing details can be captured accurately.	5	Medium	Misbah Kowser S
Sprint-2	Data Modeling	USN-6	As a user, I want customized page layouts for different record types so that only relevant information is displayed during data entry	5	High	Shazia
Sprint-2	Data Modeling	USN-7	As a manager, I want separate record types for Retail and Enterprise customers so that different business categories can be managed efficiently.	5	Medium	Shazia
Sprint-3	Automation	USN-8	As a system, I want to validate customer details and order inputs so that incorrect data entries are prevented.	3	High	Megala S
Sprint-3	Automation	USN-9	As a system, I want automated flows to send email notifications so that customers receive timely updates and offers.	5	High	Archana M
Sprint-4	Automation	USN-10	As a system, I want to automatically calculate billing amounts so that invoices are generated without manual effort.	5	High	Keerthika K
Sprint-5	Reports	USN-11	As a manager, I want sales and customer reports so that I can monitor business performance and make informed decisions.	4	High	Archana M
Sprint-6	Dashboards	USN-12	As a manager, I want visual dashboards so that I can quickly analyze sales, customers, and enterprise performance.	4	Medium	Keerthika K

Sprint	Total Story Points	Dura Tion	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	03 Mar 2026	03 Mar 2026	20	07 Mar 2026
Sprint-2	20	6 Days	04 Mar 2026	04 Mar 2022	20	07 Mar 2026
Sprint-3	20	6 Days	05 Mar 2026	05 Mar 2026	20	07 Mar 2026
Sprint-4	20	6 Days	06 Mar 2026	06 Mar 2026	20	07 Mar 2026

6. PROJECT DEVELOPMENT PHASE

Project flow

Milestone 1: Creation of developer account

Milestone 2: Object creation

Milestone 3: Tabs

Milestone 4: The Lighting App

Milestone 5: Global Picklist

Milestone 6: Fields and Relationships

Milestone 7: Creation of Record Page Layout

Milestone 8: Creation of Record Types

Milestone 9: Validation Rules

Milestone 10: Email Templates

Milestone 11: Flows

Milestone 12: Reports and Dashboards

Milestone 13: Conclusion

Implementation

Milestone 1 - Salesforce developer account creation

Creating Developer Account

The image shows the Salesforce Developer Edition sign-up page. On the left, a blue banner features a monitor displaying a Salesforce interface and the text: "Build enterprise-quality apps fast to bring your ideas to life". Below this, a list of bullet points highlights key features: building apps with drag-and-drop tools, customizing data models with clicks, using Apex code, integrating with APIs, enterprise-grade security, and customizing the UI. On the right, a white sign-up form is set against a blue background. It includes the Salesforce logo, the heading "Sign up for your Salesforce Developer Edition", and a subtext "A full-featured copy of the Platform, for free". A grey box contains the instruction: "Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial." The form fields are: "First Name*" and "Last Name*" (text boxes), "Email*" (text box), "Role*" (dropdown menu with "Your job role" selected), and "Company*" (text box with "Company Name" as a placeholder).

Build enterprise-quality apps fast to bring your ideas to life

- Build apps fast with drag and drop tools
- Customize your data model with clicks
- Go further with Apex code
- Integrate with anything using powerful APIs
- Stay protected with enterprise-grade security
- Customize UI with clicks or any leading-edge web framework

Sign up for your Salesforce Developer Edition
A full-featured copy of the Platform, for free

Complete the form to start your free trial. Our team will be in touch to help you make the most of your trial.

Milestone 2 – Objects

Setup

Milestone 3 - Tabs

Custom tabs creation

Milestone 4 - The Lightning App

Create a lightning app

Milestone 5 : Global Picklist

Create Global Picklit

The screenshot shows the Salesforce Setup interface for "Picklist Value Sets". The left sidebar contains a navigation menu with "Data", "Feature Settings", "Topics", and "Objects and Fields". Under "Objects and Fields", "Picklist Value Sets" is selected. The main content area is titled "Picklist Value Sets" and includes a "Global Value Set Detail" section with "Edit" and "Delete" buttons. Below this is the "Information" section, followed by the "Picklist Values Used" section, which shows a table of active and inactive picklist values. The "Values" section is a table with columns for Action, Values, API Name, Default, Chart Colors, and Modified By. The table lists three values: Tea powder, Cookies, and Gift Hampers, all assigned dynamically and modified by thiruseveln.p on 3/4/2026 at 2:10 AM.

Action	Values	API Name	Default	Chart Colors	Modified By
Edit Del Deactivate	Tea powder	Tea powder	☐	Assigned dynamically	thiruseveln.p, 3/4/2026, 2:10 AM
Edit Del Deactivate	Cookies	Cookies	☐	Assigned dynamically	thiruseveln.p, 3/4/2026, 2:10 AM
Edit Del Deactivate	Gift Hampers	Gift Hampers	☐	Assigned dynamically	thiruseveln.p, 3/4/2026, 2:10 AM

The screenshot shows the Salesforce Setup interface for "Object Manager: Employer Account". The left sidebar contains a navigation menu with "Details", "Fields & Relationships", "Page Layouts", "Lightning Record Pages", "Buttons, Links, and Actions", "Compact Layouts", "Field Sets", "Object Limits", "Record Types", "Related Lookup Filters", "Search Layouts", and "List View Button Layout". Under "Fields & Relationships", "Fields" is selected. The main content area is titled "Object Manager: Employer Account" and includes a "Details" section with a list of fields and their descriptions. The fields listed are Email, Geolocation, Number, Percent, Phone, Picklist, Picklist (Multi-Select), Text, Text Area, Text Area (Long), Text Area (Rich), Text (Encrypted), Time, and URL. Each field has a description of its functionality.

Field	Description
Email	Allows users to enter an email address, which is validated to ensure proper format. If this field is specified for a contact or lead, users can choose the address when clicking Send an Email. Note that custom email addresses cannot be used for mass emails.
Geolocation	Allows users to define locations. Includes latitude and longitude components, and can be used to calculate distance.
Number	Allows users to enter any number. Leading zeros are removed.
Percent	Allows users to enter a percentage number, for example, '10' and automatically adds the percent sign to the number.
Phone	Allows users to enter any phone number. Automatically formats it as a phone number.
Picklist	Allows users to select a value from a list you define.
Picklist (Multi-Select)	Allows users to select multiple values from a list you define.
Text	Allows users to enter any combination of letters and numbers.
Text Area	Allows users to enter up to 255 characters on separate lines.
Text Area (Long)	Allows users to enter up to 131,072 characters on separate lines.
Text Area (Rich)	Allows users to enter formatted text, add images and links. Up to 131,072 characters on separate lines.
Text (Encrypted)	Allows users to enter any combination of letters and numbers and store them in encrypted form.
Time	Allows users to enter a local time. For example, "2:40 PM", "14:40", "14:40:00", and "14:40:50.600" are all valid times for this field.
URL	Allows users to enter any valid website address. When users click on the field, the URL will open in a separate browser window.

Milestone 6 : Fields & Relationships

Create Custom fields for Employer Account

This screenshot shows the Salesforce Setup interface for creating a custom field. The left sidebar contains a navigation menu with options: Details, Fields & Relationships (selected), Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, and List View Button Layout. The main content area is titled "SETUP > OBJECT MANAGER : Employer Account". It displays a list of field types on the left: Email, Geolocation, Number, Percent, Phone, Picklist, Picklist (Multi-Select), Text (selected), Text Area, Text Area (Long), Text Area (Rich), Text (Encrypted), Time, and URL. To the right of the list, detailed descriptions for each field type are provided. At the bottom right, "Next" and "Cancel" buttons are visible.

This screenshot shows the configuration form for a new custom field named "First_Name". The left sidebar is identical to the previous screenshot. The main content area is titled "SETUP > OBJECT MANAGER : Employer Account". The form includes the following fields and options:

- Length:** 25
- Field Name:** First_Name
- Description:** (empty text area)
- Help Text:** (empty text area)
- Required:** ☒ Always require a value in this field in order to save a record
- Unique:** ☐ Do not allow duplicate values
 - ☐ Treat "ABC" and "abc" as duplicate values (case insensitive)
 - ☐ Treat "ABC" and "abc" as different values (case sensitive)
- External ID:** ☐ Set this field as the unique record identifier from an external system
- Auto add to custom report type:** ☒ Add this field to existing custom report types that contain this entity
- Default Value:** Show Formula Editor

Below the form, a note states: "Use formula syntax. Enclose text and picklist value API names in double quotes ('The_text'). Include numbers without quotes (25), show percentages as decimals (0.10), and express date calculations in the standard format: (Today() + 7). To reference a field from a Custom Metadata type record use: \$CustomMetadata.Type__mdt.Record.Pitname.Field__c."

Create Custom fields for Employer Account Using Picklist

Employer Account: Custom Account

The screenshot shows the Salesforce Setup interface for creating a new custom field for an Employer Account. The browser address bar displays the URL: `https://orgfarm-82943698e6-dev-ed.develop.my.salesforce-setup.com/lightning/setup/ObjectManager/011f000005u8mP/FieldsAndRelationships/new`. The page title is "Employer Account: New Custom Field". The left sidebar shows the "Fields & Relationships" section selected. The main content area is titled "Step 2. Enter the details" and includes the following fields and options:

- Field Label:** Designation
- Values:**
 - ☐ Use global picklist value set
 - ☒ Enter values, with each value separated by a new line
- Value Set:** Manager, Finance and Accounting, Kitchen Staff, Cashier, Servers
- ☐ Display values alphabetically, not in the order entered
- ☐ Use first value as default value
- ☒ Restrict picklist to the values defined in the value set
- Field Name:** Designation

Create Custom fields for Customer Account

The screenshot shows the Salesforce Setup interface for creating a new custom field for a Customer Account. The browser address bar displays the URL: `https://orgfarm-82943698e6-dev-ed.develop.my.salesforce-setup.com/lightning/setup/ObjectManager/011f000005u949/FieldsAndRelationships/new`. The page title is "Customer Account: New Custom Field". The left sidebar shows the "Fields & Relationships" section selected. The main content area is titled "Step 2. Enter the details" and includes the following fields and options:

- Field Label:** (empty)
- Values:**
 - ☐ Email
 - ☐ Geolocation
 - ☐ Number
 - ☐ Percent
 - ☐ Phone
 - ☐ Picklist
 - ☐ Picklist (Multi-Select)
 - ☒ Text
 - ☐ Text Area
 - ☐ Text Area (Long)
 - ☐ Text Area (Rich)
 - ☐ Text (Encrypted)
 - ☐ Time
 - ☐ URL
- Field Name:** (empty)

Specify the type of information that the custom field will contain.

Data Type

☐ None Selected

Select one of the data types below.

☐ Auto Number

A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.

☐ Formula

A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.

☐ Roll-Up Summary

A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.

☐ Lookup Relationship

Creates a relationship that links this object to another object. The relationship field allows users to click on a lookup icon to select a value from a popup list. The other object is the source of the values in the list.

☐ Master-Detail Relationship

Creates a special type of parent-child relationship between this object (the child, or "detail") and another object (the parent, or "master") where:

- The relationship field is required on all detail records.
- The ownership and sharing of a detail record are determined by the master record.

Milestone 7 : Page Layouts

For the personalized field view in Customer Accounts, let's create two page layouts Online orders and Walk-In orders.

Online Orders page layout

The screenshot shows the Salesforce Setup interface for the 'Online Orders' page layout of the 'Customer Account' object. The left sidebar contains a navigation menu with the following items: Details, Fields & Relationships, Page Layouts (selected), Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, and List View Button Layout.

The main content area displays the 'Online Orders' page layout configuration. At the top, there is a 'Quick Find' search bar and a 'Layout Properties' button. Below this, a table lists the fields included in the layout:

Fields	Chai	Date of Birthday ...	Last Modified By	Payment Mode	Type of Items
Blank Space	Created By	Email ID	Last Name	Phone Number	
: Associated Empl...	Customer Account ...	First Name	Order Quantity	Products purchased	
Address	Date of Birth	Gender	Owner	Total Bill	

Below the table, there is a 'Customer Account Sample' section. Underneath, there is a 'Highlights Panel' section with the text 'Customize the highlights panel for this page layout...'. Below the highlights panel, there is a 'Quick Actions in the Salesforce Classic Publisher' section with the text 'Actions in this section are currently inherited from the global publisher layout. You can override the global publisher layout of actions for the publisher on pages that use this layout.' Below the quick actions section, there is a 'Salesforce Mobile and Lightning Experience Actions' section.

Milestone 8 - Record Types

To Differentiate the records and data stored in Customer Accounts, let's create two different Record Types.

Online orders and Walk-In orders.

Walk-In Orders Record Type

Milestone 11 – Flows

Schedule Triggered Flow

The screenshot shows the Salesforce 'Flows' page. At the top, there's a 'SETUP' button and a 'Flows' header. A 'Flow Trigger Explore' link is in the top right. Below the header, it says 'Flow Definitions' and 'All Flows' with a dropdown arrow and a pin icon. A status bar indicates '41 items • Sorted by Flow Label • Filtered by All flow definitions • Updated a minute ago'. The main table lists flow definitions with columns: Flow Label, Process Type, Active, Temporary, Package State, Package Name, Last Modified, and Last Modified. Two flows are visible: 'Basic Approval Request' (Flow Orchestration for CMS) and 'Book Appointment from Invitation' (Salesforce Scheduler Flow).

Flow Label ↑	Process Type	Active	Tem...	Package State	Pack...	Last Mo...	Last Modified
Basic Approval Request	Flow Orchestration for CMS	✓	✓	Managed-Installed			
Book Appointment from Invitation	Salesforce Scheduler Flow	✓	✓	Managed-Installed			

Flow Builder

The screenshot shows the Salesforce Flow Builder interface. The top bar indicates 'Developer Edition' and the flow name 'Happy Birthday Email Flow - V1'. The flow is currently 'Inactive'. The main canvas shows a flow diagram with three steps: a 'Start' step (labeled 'Tue, Mar 3, 2026, 8:00:00 PM, Daily Start'), a 'Send Happy Birthday Email' step (labeled 'Email Alert'), and an 'End' step. The 'Send Happy Birthday Email' step is selected, and its properties are shown in the right-hand pane. The properties include 'Label' (Send Happy Birthday Email), 'API Name' (Send_Happy_Birthday_Email), and 'Description'. The 'Set Input Values' section shows a variable 'Record ID' being mapped to 'Record ID' from the 'Customer_Account' object. The bottom status bar shows the system time as 09:12 on 04-03-2026.

Flow Builder: Happy Birthday Email Flow - V1

Last saved on 3/4/2026, 08:40 PM | Inactive | Run | Debug | Save As New Version | Save | Activate

Flow Steps:

- Start: Tue, Mar 3, 2026, 8:00:00 PM, Daily Start
- Send Happy Birthday Email: Email Alert
- End

Properties for 'Send Happy Birthday Email':

- Label: Send Happy Birthday Email
- API Name: Send_Happy_Birthday_Email
- Description: (Empty)

Set Input Values:

- Record ID: (Mapped to Record ID from Customer_Account)

Customer Accounts

The screenshot shows the 'Customer Accounts' page in a web application. The header includes a search bar, navigation links for 'Customer Accounts', 'Employer Accounts', 'Enterprise Accounts', 'Reports', and 'Dashboards', and a 'Developer Edition' badge. The main content area is titled 'Customer Accounts' and features a 'Recently Viewed' section with a list of 2 items. The list has a header 'Customer Account Name' and two rows, both containing the name 'Shazia'. Action buttons like 'New', 'Import', 'Change Owner', and 'Assign Label' are visible at the top right of the list.

	Customer Account Name	
1	Shazia	
2	Shazia	

Employer Accounts

The screenshot shows the 'Employer Accounts' page in the same web application. The layout is similar to the 'Customer Accounts' page, but the 'Recently Viewed' section only contains 1 item. The list has a header 'Employer Account Name' and one row containing the name 'Shazia'. The same action buttons are present at the top right.

	Employer Account Name

Milestone 12 - Conclusion

In conclusion, the development of TheChaiShop&Co CRM application marks a significant stride in enhancing the store's operational efficiency and customer relationship management capabilities. Seamlessly integrating employer details, customer information (both online and offline), and enterprise data, this application streamlines business processes and enables informed decision-making. The automation of sales calculations, including order quantity and total bill amount, reduces errors and empowers employees to focus on delivering exceptional service. Moreover, automated email notifications for customers' birthdays foster personalized communication and enhance customer engagement.

1. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized data management
- Reduced manual work
- Automated calculations
- Improved customer engagement
- Real-time analytics

Disadvantages

- Requires Salesforce license
- Internet dependency
- Limited offline access

2. Conclusion:

The CRM Application for TheChaiShop&Co successfully improves business operations by integrating customer data, automating billing, and enabling intelligent reporting. The system reduces errors, saves time, and enhances customer relationships through automation and analytics.

3. FUTURE SCOPE

- Mobile CRM integration
- AI-based sales prediction
- WhatsApp/SMS alerts
- Inventory management
- Multi-branch support
- Advanced customer profiling
